Annex 2:
Student declaration on the use of artificial intelligence in thesis writing

The use of artificial intelligence (AI) as a supporting tool in thesis writing is permitted as long as it is responsible, transparent, and within clearly defined limits, and the thesis reflects the author's own intellectual work. The use of AI must not undermine the educational purpose of thesis writing or replace human creativity, thinking, or decision-making.

The use of AI is governed by the Moholy-Nagy University of Art and Design's regulations on the use of artificial intelligence currently in effect

The content of the student declaration and the appropriate and transparently documented use of AI in accordance with the rules must not in themselves result in a less favourable assessment of the thesis.

I, the undersigned (name, Neptun code),

_____, declare that, in preparing my thesis entitled _____ as part of the _____ programme, I have read and complied with the University's *Regulations on Artificial Intelligence and Plagiarism*. In my use of AI, I have therefore observed the principles of transparency, ethical use, creative autonomy, informed use, and responsibility.

I declare that, in preparing my thesis, I only used the artificial intelligence tools specified below and only in the cases indicated below:

Technology used	Purpose of use	Method and area of use

I accept full responsibility for my thesis in its entirety.
